Experienced in Software Engineer and Technical Delivery with a strong hands-on background as a Full Stack JavaScript Developer in Project Fleet Management Systems. Proven track record in leading end-to-end software delivery, aligning business processes, client requirements, and technical implementation. Skilled in project planning and stakeholder coordination while remaining actively involved in system design and development using React.js, [Node.js](#), real-time technologies, and IoT integrations. Adept at bridging technical and business perspectives to ensure scalable, reliable, and high-quality software products are delivered on time.

WORKING EXPERIENCE

Lead Developer

Minergo Systems – Angsana, Kalimantan Selatan
Jan 2025 – Des 2025

- **Spearheaded the design and end-to-end delivery of "Famous Lite,"** a scalable fleet management solution integrating GPS and AI camera systems utilizing React.js and Node.js to align with operational needs.
- **Directed Agile/Scrum methodologies,** managing sprint planning, created more than 200 story points, and delegated tasks to ensure efficient execution and high-quality product delivery.
- **Acted as the primary technical liaison,** aligning client requirements, business processes, and cross-functional teams (Product, QA, DevOps, Safety/OHS) to build reliable system architectures.
- **Ensured software reliability and quality** by overseeing bug triage, root-cause analysis, and maintaining comprehensive project documentation (BRD, TSD, API specs).

Fullstack Javascript Developer

Minergo Systems – Angsana, Kalimantan Selatan
Sep 2024 – Jan 2025

- **Built and optimized the Fleet Management System (FMS)** using React.js and Node.js, implementing RESTful APIs for efficient cross-platform communication.
- **Integrated MQTT and WebSockets** to process and display real-time IoT telemetry data from On-Board Units (OBU) for live vehicle tracking and notifications.
- **Developed core operational features,** enabling real-time Truck On-Duty/On-Rest monitoring and comprehensive Roster Planning for driver shift management.
- **Created analytical Cycle Report modules** to generate insights on duty cycles, standby durations, and operational activities for stakeholder analysis.

IT Staff (Web Developer & IT Support)

PT. Karya Bersama Anugerah, Tbk. – Balikpapan
Mar 2021 – Des 2023

- **Designed and maintained user-friendly WordPress websites**, creating custom themes tailored to product specifications and community information needs.
- **Administered comprehensive website security protocols**, managing firewall configurations, automated backups, and routine core/plugin maintenance to mitigate vulnerabilities.
- **Created and published digital marketing content**, producing web banners, news articles, and product information aligned with corporate branding strategies.
- **Provided comprehensive hardware and network support**, resolving technical issues and maintaining computer systems, software, and multimedia infrastructure.

Freelance Fullstack Web Dev

Caseku.bpn – Balikpapan

Sep 2021 – Jan 2022

- **Engineered a custom full-stack web application** using Laravel, MySQL, HTML, CSS, and JavaScript to streamline client operations, including order management, production tracking, and automated receipt generation.
- **Developed a dynamic admin dashboard** supported by robust server-side APIs to efficiently manage inventory and record business transactions tailored to specific client needs.

Laboratory Assistant

Mulawarman University Faculty of Engineering – Samarinda

Sep 2018 – April 2021

- **Mentored students and conducted practicum sessions** for core computer science subjects, including Computational Thinking, System Operations, and Programming Fundamentals/Algorithms.
- **Instructed advanced practical courses** in Web Programming, Software Development, and Framework Programming (Laravel), guiding students to bridge theoretical concepts with practical coding.
- **Coordinated seamlessly with lecturers** to organize teaching schedules, prepare technical modules, and ensure smooth day-to-day laboratory operations.

EDUCATION

Bachelor of Computer Science (S.Kom) – GPA 3.75 / 4.00

Graduated – Jun 2024

Developed an LSTM-based machine learning model for budget forecasting, executing comprehensive data preprocessing, time-series analysis, and model evaluation to deliver accurate predictions that support strategic financial decision-making

SKILL & OTHER

React.js, Next.js, Node.js, Express.js, Laravel, RESTful APIs, WebSocket, MQTT, Kafka, MySQL, PostgreSQL, Database Optimization, Manual Testing, Cypress (E2E), Postman (API Testing), HTML5, CSS3, Tailwind.
